EDUCATION

Boston University **Boston, MA**
B.A. Computer Science & Economics *Expected Graduation: May 2027*

- **Relevant Courses:** Software Engineering, Database Systems, Analysis of Algorithms, Data Structures & Algorithms.

Cornell University, online certificate in Machine Learning Foundations August 2025

SKILLS AND ACHIEVEMENTS

Technical Skills: Python, Java, C, HTML, CSS, JavaScript.
Frameworks & Tools: React. js, React native, Flask, Git, Pandas, Matplotlib, Numpy, Scikit-learn.
Activities & Societies: ColorStack, Rewriting The Code, CodePath, Girls Who Code, SEO Career.
Languages: English (native), American Sign Language (intermediate)

PROFESSIONAL EXPERIENCE

CryptoBites **Remote**
Software Developer Intern *June 2025 - September 2025*

- Developed and tested 6+ features using React Native and Python, enhancing the customer experience through improved UI responsiveness and functionality.
- Improved the address parsing system to handle directional and hyphenated formats, increasing validation accuracy by 28% and reducing failed deliveries caused by formatting errors.
- Engineered a location-based delivery fee system using real-time geolocation, improving pricing accuracy and transparency across thousands of delivery zones.

Lavner Education Tech Revolution Summer Camp **New York University**
Technical Instructor/Intern *June 2024 - September 2024*

- Instructed 50+ campers in courses such as Coding with Python, Coding with Java, and more, resulting in an 88% improvement rate, enhancing campers' understanding of coding fundamentals and advanced programming concepts.
- Facilitated 200+ technical projects specializing in digital art, game development, graphical user interfaces, and object-orientated programming, leading to a 93% completion rate, providing young learners with hands-on experience in creating impressive programming innovations.
- Provided one-on-one mentorship to campers, guiding them through complex coding challenges and encouraging them to develop problem-solving and critical-thinking skills.

PERSONAL PROJECTS

American Sign Language Tracker| Python | *https://github.com/briannammatey/WeatherApp* *August 2025*

- Developed a computer vision-based ASL hand tracking application using OpenCV and MediaPipe to detect, track, and interpret hand gestures in real time.
- Trained a Convolutional Neural Network (CNN) to classify hand signs from captured video frames, using data preprocessing, augmentation, and validation techniques to improve model accuracy.

Weather App | Java | *https://github.com/briannammatey/WeatherApp* *August 2024*

- Programmed a Java-based weather app using the OpenWeatherMap and a geolocation API through RESTful services, leveraging HTTP clients and JSON parsers to provide hourly weather updates for over 10,000 cities.
- Optimized performance by reducing response time from an average of 900 ms to 300 ms, achieving a 66% improvement rate and ensuring seamless user interactivity.
- Enhanced user experience by processing and displaying JSON data with hourly updates through a Java Swing GUI, offering precise, city-based weather information directly within the application.

ACTIVITIES & LEADERSHIP

Women in the Association for Computing Machinery (WACM) **Boston University**
Secretary *September 2025 - Present*

- Selected to serve on the executive board of BU's Women in ACM chapter, supporting operations for events and mentorship programs focused on equity in computer science.
- Organizing new initiatives, including LeetCode practice sessions, mentorship opportunities between undergraduates and graduate students, and multimedia tech projects to encourage creative expression in computer science

BreakThrough Tech AI **Cambridge, MA**
Cohort Member *June 2025 - June 2026*

- Selected for a national AI/ML fellowship with a 25% acceptance rate, dedicated to expanding representation in tech.
- Strengthened foundational knowledge in machine learning by completing 9 hands-on lab projects covering data cleaning, model development, deep learning, and evaluation techniques.
- Applied tools such as NumPy, Pandas, Matplotlib, Scikit-Learn, and TensorFlow to analyze datasets, build predictive models, and visualize performance metrics.
